METHODS FOR TREATING

Attorney Docket No.: 31110-0002

AN ARTERY OR VEIN IN A HUMAN SUBJECT

INFORMATION DISCLOSURE STATEMENT UNDER 37 C.F.R § 1.97(a)(4)

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

In accordance with the duty of disclosure imposed by 37 C.F.R. §1.56 to inform the Patent and Trademark office of all references coming to the attention of applicants or their attorneys which are or may be related to patentability of the claimed invention, Applicant hereby directs the Examiner's attention to references BJ and BK, which are listed on the accompanying PTO Form 1449. Copies of references BJ and BK are submitted herewith. Applicant respectfully requests that the cited references be considered and made of record in the prosecution file of the instant application.

Reference BJ and BK were referred to in a Written Opinion mailed on July 25, 2005 in International Application No. PCT/US04/05192. A copy of the Written Opinion is submitted herewith.

CERTIFICATE OF FACSIMILE TRANSMISSION UNDER 37 C.F.R. § 1.8(a)

I hereby certify that this paper is being filed with the United States Patent and Trademark Office by facsimile transmission on January 19, 2006 to facsimile telephone number (571) 273-0923.

Stephen S. Rabinowitz (Reg. No. 40,286)

No fee is believed to be payable for this Information Disclosure Statement. If any fee is due, the Commissioner is authorized to charge the required fee to Fried, Frank, Harris, Shriver & Jacobson LLP Deposit Account No. 06-0920.

Respectfully submitted,

Date:

January 19, 2006

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the international Bureau under Rule 66.1bis(b) that written opinions of this International Scarching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form FCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

3. For further details, see notes to Form PCT/ISA/220.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No. PCT/US04/05192

Box No. I Basis of this opinion
1. With regard to the language, this opinion has been established on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.
This opinion has been established on the basis of a translation from the original language into the following language which is the language of a translation flumished for the purposes of international search (under Rules 12.3 and 23.1(b)).
2. With regard to any nucleotide and/or amino acid sequence disclosed in the international application and necessary to the claimed invention, this equinion has been established on the basis of:
a. type of material
a sequence listing
table(s) related to the sequence listing
b. format of material
in written format
in computer readable form
v. time of filing/furnishing
contained in international application as filed.
filed together with the international application in computer readable form.
furnished subsequently to this Anthonity for the purposes of search.
3. In addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

PCT/US04/05192

Box No. IV Luck of unity of invention
1. In response to the invitation (Form PCT/ISA/206) to pay additional fees the applicant has: paid additional fees
poid additional feet under protest
not paid additional fees
2. This Authority found that the requirement of unity of invention is not complied with and chose not to invite the applicant to
pay additional focs. 3. This Amhority considers that the requirement of unity of invention in accordance with Rule 13.1, 13.2 and 13.3 is
complied with
not complied with for the following reasons:
See the lack of unity section of the International Search Report(Form PCT/ISA/210)
·
•
4. Consequently, this opinion has been established in respect of the following parts of the international application:
all parts.
the parts relating to claims Nos. <u>1.3.7.15-26.33-50 and 65-68</u>
Form PCT/ISA/237 (Box No. IV) (January 2004)

International application No. PCT/US04/05192

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

Box No. V Reasoned statement under Rule 43 bit. 1(a)(1) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement						
1. Statement						
Novelty (N) Claims 1.3.7.15-26.33-50 and 65-68	YB\$					
Claims MONE	NO					
Inventive step (IS) Claims NONE	YES					
Claims 1.3.7.15-26.33-50 and 65-68						
Industrial applicability (IA) Claims 1.3.7.15-26.33-50 and 65-68	YES					
Claims NONE	NO					

2. Citations and explanations:

<u>:</u>.-

Claims 1,3,7,15-26,33-50 and 65-68 lack an inventive step under PCT Article 33(3) as being obvious over Dobrin et al. (Cardiovaso Sing 2(4):484-488, 1994) in view of Wir et al. (US 5,712,247); Trubel et al. (Bur J Vaso Endovaso Surg 10(4):415-423, 1995) and Tsukornik (US 6,494,861). Dobrin et al. disclose that inducing the degradation of elastin in arteries produces vessel dilatim of 6-10% at 100 mm Hg, while inducing the degradation of collagen produces vested dilation of 10-23% at 100 mm Hg (see p. 485, right column, p. 487, 1st and last peragraphs, and p. 488, last peragraph). Wu et al. disclose that increased amounts of clastase are released from neutrophils by contacting them with an agent such as LPS, TNF- α, or IL-3 (see col. 12, lines 24-33). Thus, to produce blood vessel dilation, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to administer an agent that increases clustese release in blood vessels, such as LPS, TNF- a, or IL-8, because Wu et al. teach that these agents increase the amount of clastase in blood vessels and Dobrin et al. teach that when clastin in blood vessels is degraded, such as by the action of clastase, the blood vessels dilate.

Trubel et al, disclose that when two blood vessels of different diameters are joined by anastomosis, or when a blood vessel and a vascular graft of different diameter are joined by anastomesis (the grafts containing Decree meth), distal enastometic infinal hyperplasia (DAIH) occurs. The degree of DAIH is proportional to the degree of mismatch in the diameters of the blood vessels, or blood vessel and graft, joined (see pp. 419-421). DAIH occludes the joined blood vessels. It would have been covious to one of ordinary skill in the art to administer an agent that induces the release of classes to a subject with a blood vessel occlusion resulting from a vascular graft or vascular anastomosis at the site of the blockage, because Dobrin et al. and Wu et al. teach that this agent produces blood vessel dilation. Trabel et al. teach that, in vescular anastomoses or vescular grafts with conduits of different diameters, intimal hyporplasia may result. The skilled artisan would have recognized that blockage in the occumded blood vessels or conduits could be relieved by administering an agent to this site that dilates the blood vazzels, thereby restoring at least partial blood circulation.

Tsukernik discloses a device for and method of delivering a drog internally to a patient via a balloon eatheter. The device can deliver the drog to locations in the vasculature, such as blood vessels or the heart, or to the urinary tract (the lumen of the urethra (see col. 3, lines 12-29, and col. 4, lines 28-29). The site to which the drug is delivered is controlled by positioning the balloon eatheter. For controlling drug delivery, cycling of the pressure used to inflate the balloon is synchronized with cycling of the pressure that drives a syringe that infuses the drog (see col. I, lines 9-19, and col. 4, lines 58-65). It would have been obvious to one of ordinary skill in the art to deliver a drug for dilating a blood vessel, such as the clusters inducing agent taught by Dobrin et al. and Wu et al., by using the balloon eatherer of Tsukernik, because Tsukernik teaches that this balloon eatherer is designed for delivering cardiovascular and urinary tract drugs to a precise location in a patient.

Regarding claim 65, neutrophils may be found in conduits of the body other than blood vossels, such as in bronchi, particularly in the case of a subject suffering from a respiratory tract infection. In such a case, it would have been obvious to one of ordinary skill in the art to administer an agent that is an elastase inducer to dilate the brenchi so that the subject could breath more easily.

In view of the foregoing, the claims fail to smixfy the requirement of an inventive step.

Form PCT/ISA/237 (Box No. V) (Jamary 2004)
